Summary

The National Citizen Survey™ (The NCS™) is a collaborative effort between National Research Center, Inc. (NRC) and the International City/County Management Association (ICMA). The survey and its administration are standardized to assure high quality research methods and directly comparable results across The NCS communities. This report discusses differences in opinion of survey respondents by City Council District.

Responses in the following tables show only the proportion of respondents giving a certain answer; for example, the percent of respondents who rated the quality of life as “excellent” or “good,” or the percent of respondents who attended a public meeting more than once a month. ANOVA and chi-square tests of significance were applied to these comparisons of survey questions. A “p-value” of 0.05 or less indicates that there is less than a 5% probability that differences observed between District are due to chance; or in other words, a greater than 95% probability that the differences observed are “real.” Where differences were statistically significant, they have been shaded grey.

The margin of error for all respondents 558 is generally no greater than plus or minus four percentage points around any given percent. The margin of error for subgroups is less precise. For subgroups of approximately 100 respondents, the margin of error is plus or minus 10 percentage points. Four Council Districts were tracked for comparison and the number of completed surveys for each are in the figure below.

Figure 1: Geographic Areas

| City Council District | Number of Completed Surveys |
|-----------------------|-----------------------------|
| District 1 | 124 |
| District 2 | 152 |
| District 3 | 149 |
| District 4 | 133 |
| Overall | 558 |

Overall, residents of different geographic areas within Cañon City had shared perspectives across most items on the survey. Among the few differences observed, residents of District 1 sometimes gave lower ratings than those who lived elsewhere.
